

**OWENS CORNING
TURBO SERVICE TESTIMONIAL**

We utilize four Joy turbocompressors, 3 x TA-50 & 1 x TA-38. Since acquiring the services of TG Turbocompressor to carry out the contract servicing of these units we have experienced nothing but positive results. Our units run better and smoother than ever and we have had no unscheduled down time.

In addition to the excellent hands-on service that we have experienced, their suggestion to replace the OEM controls with the AirLogix Airmaster Control from Case Engineering has proven to be a milestone in our quest to significantly reduce our operating costs. The end result is that we now run the entire plant on two TA-50 units 80% of the time, with zero blow off, whereas we used to run two TA-50's and the TA-38, with irregular blow off on all three units.

TG also maintain regular contact with us including site visits, between service intervals.
